

About Stuart Maue

Founded in 1985, Stuart Maue is the oldest legal auditing firm in the United States. Drawing upon our 25 years of professional experience, and coupled with cutting edge technology, Stuart Maue's superior legal cost analysis provides our clients with reliable results from experts in the industry, significant savings, and vital management data.

Trustworthy. Experienced. Professional. These are just a few of the terms our customers attribute to Stuart Maue. Our clients, who include Fortune 500 corporations, United States Bankruptcy Courts, law firms and small companies, rely on the analysis of Stuart Maue's attorneys and accountants to produce detailed findings of billing issues and overcharges. The results of our work are produced in the manner that best serves the needs of each client, and Stuart Maue provides ongoing support of our work product including but not limited to providing expert testimony and explaining our findings to the law firm.

A Specialized Approach. Stuart Maue's analysis consists of attorneys and accountants applying a proven methodology based upon applicable rules of professional responsibility, case law and other precedents bearing upon the reasonableness of attorney's fees, and the custom and practice within the legal community and within specific industries. In addition to the legal invoices, we may examine items including supporting documentation, retention documents, applicable procedures/guidelines, case files, and/or transcripts. We combine our expertise with cutting edge technology to allow efficient data transfer and analysis as well as providing our clients with instant access to the resulting findings and data.

Significant Results. Our clients enjoy substantial savings and gain vital insights into their legal spend. The most fundamental results consist of the reduction in past, present, and/or future legal fees and expenses. However, the benefits of our review also include improved billing behavior by law firms and vendors as well as the evaluation of past and current costs, budgets, and trends. Drawing upon the power of our data warehouse and advanced analytics, we customize management reports for clients and use the resulting metrics to compare law firms and vendors, project costs going forward, and formulate the optimal allocation of resources.
